Abstract

Student Performance Analytics Dashboard

The **Student Performance Analytics Dashboard** is a data-driven web-based system designed to analyze, monitor, and visualize students' academic performance in an effective and user-friendly manner. The system collects and organizes academic data such as marks, attendance, assignment scores, examination results, and other relevant performance indicators. The collected data is processed and presented through interactive dashboards, enabling students, faculty, and academic administrators to easily understand performance trends.

The dashboard provides useful visualizations such as subject-wise performance, attendance analysis, semester-wise progress, and identification of areas where students may require additional academic support. By applying basic data analytics techniques, the system can identify performance patterns and provide meaningful insights for better academic decision-making. It can also help faculty monitor students who show declining performance and take timely corrective measures.

The proposed system aims to reduce the effort involved in manually analyzing large amounts of student data while improving the accessibility and clarity of academic information. Overall, the **Student Performance Analytics Dashboard** provides a centralized platform for transforming academic records into meaningful insights, supporting data-driven decision-making and helping improve student learning outcomes.
